

Aiden Precision Coffee Maker: Brew Profiles

What is a brew profile?

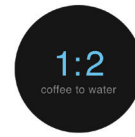

Think of a brew profile like a brew recipe. Customize as many variables as you'd like to create your own and share it with others:

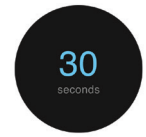

Temperature

Ratio

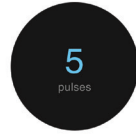

Bloom ratio

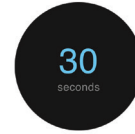

Bloom duration

Bloom temperature

Number of pulses

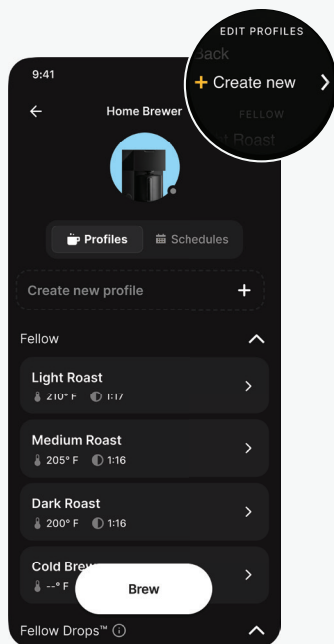

Time between pulses

Pulse temperature

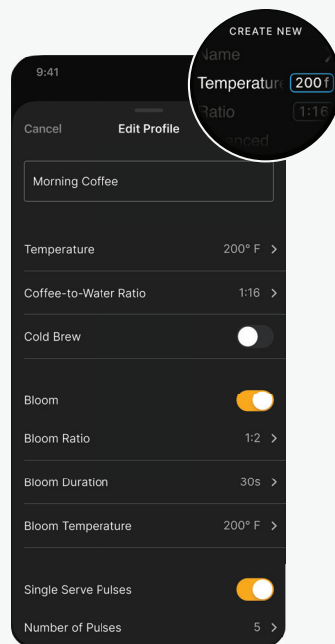

How to create and share a brew profile

You can create a brew profile on Aiden or the app, but the app is required to be able share it with others.

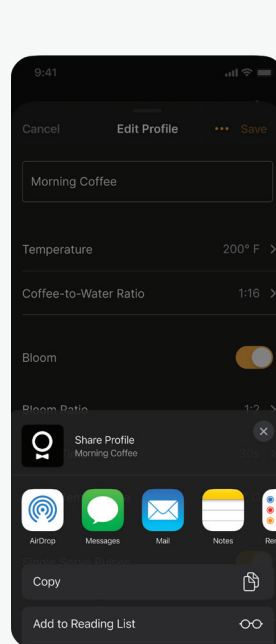

STEP 01 Create New Profile

In the Fellow app or directly on Aiden, select Profiles in the menu and click "create new profile."

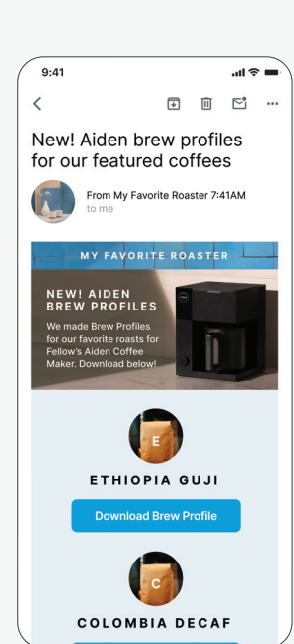

STEP 02 Customize Profile

Set a name, customize all of the variables, and click save.

STEP 03 Create Link

Tap on the saved profile name in the Fellow app and click the share icon to create a sharable link.

STEP 04 Share!

Once you have a brew profile link, you can send it to your customers, post it on your website, share in email campaigns, or even create a QR code for your packaging.
