

## Corvo EKG™ Electric Kettle

---

### Feature and Brew Guide

*Hello Friend,*

*Start here to embark on your Corvo EKG journey.*

Soon, you and I will be inseparable. Some people say the bond between brewer and kettle is even stronger than the bond between mother and child. And by some people, I mean I said that once. So it must be true. Anyway, I'm looking forward to brewing great tea and coffee together for years to come. In the meantime, check out this guide to help you get started:

#### **Pages 1+ 2: Corvo EKG Features Guide**

Quickly learn the ins and outs of your new electric kettle to take advantage of the different temperature and timing settings.

#### **Pages 3+4: How To Evaluate Tea + Coffee**

With Corvo EKG's variable temperature control, you can brew with to-the-degree precision. For both tea and coffee, water temperature is critical. Dial in your degrees and bid goodbye to bitterness and burning. Then, use our tasting guide to learn how to evaluate your cup.

It's important to read all of these pages before using Corvo EKG so you're fully informed. It's even more important that you please read all safety and warning instructions before using this kettle. Keep all instructions for future reference. Seriously though.

## Features Guide

### Turn On

Push the main button to turn on your kettle.

### HOLD and F/C

Use the back toggles to choose temperature and HOLD settings.

### HOLD Mode

Corvo EKG's HOLD mode maintains your SET temperature for 60 minutes when switched on. If HOLD mode is off, your kettle will reach SET temperature, stay there for 5 minutes, then stop heating and go into standby for 15 minutes before turning off.

When you have turned HOLD mode on, the screen will flash "HOLD ON." When your kettle is holding your SET temperature, HOLD will appear at the top of the LCD screen.

### SET Temperature

Twist the main button to SET desired temperature. Screen will show "SET" when temperature is being set.

### Heating

When the F/C is blinking, the kettle is heating. The top number on your screen is your SET temp. and the bottom is your current temp.

### SET Temp. Reached

Once your SET temp. is reached, your kettle will steadily maintain that temp. thanks to the smart PID controller.

### Start/Stop Brew Stopwatch

To start or stop the built-in Brew Stopwatch, hold down the main button for 2 seconds. Push main button again to stop the stopwatch and return to main screen.

### Turn Off

Push the main button to turn off kettle.

## How To Evaluate Tea + Coffee

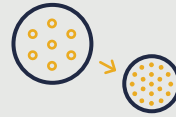

### Aroma

What do you smell? Look for a subtle bouquet of herbs, fruits, flowers, and other smells. Aroma can help you identify freshness, overall quality, and any defects or off-tastes in the bean or leaves.

### Acidity

Not to be confused with sourness, which can be a defect, acidity is a brightness that can give tea and coffee life! Look for sweet tartness and delicate crispness in many great teas and coffees. For coffee, in general, dark roasted beans will be less acidic.

### Body

Body, or mouthfeel, can be thought of as the weight of the tea and coffee. To simplify, think skim milk vs. 2% vs. whole milk. Is the mouthfeel of your drink light and silky, heavy and rich, or thin and lifeless?

### Flavor

Flavor attempts to identify specific tastes. Floral, fruit, tobacco, wine, nutty, earthy, spice, and smoky are just a few of the many ways to describe tea and coffee. What can you identify?

### Sweetness

Is your drink super sweet or only subtle? Does the sweetness resemble that of caramel, hard candy, or peaches?

### Finish

What lingers after your drink is consumed? Great teas and coffees remain on the tongue even after the drink has been consumed. Look for sweetness and pleasing flavors to endure.
