BREWING IN BREW ASSIST MODE

Get the coffee-to-water ratio right every time.

- ① After following steps 1-4 in Quick Start with Brew Assist, press the **timer button** to move to the next step.
- ② Check out the display. Your saved target water weight in grams is on the right. The current water weight in grams is in the center (it starts at zero until you pour). The timer is on the left (it starts at zero, too).
- ③ Start pouring and Tally will start timing! Pour until the center (current) and right (target) weights are the same. The center oval will change from white to black to let you know your perfect brew is ready.

Tips

- If you prefer a countdown, you can press the **timer button** before pouring. You can pause the timer any time by pressing it again while timing.
- Press the **dial** at any time to tare the scale. This will not erase your water target if already set.
- To start another brew, press and hold the **timer button** until the scale resets.
