Specifications and Requirements

FETCO CBS-1260 Brewers have unique construction only available for these models.

Water Requirements:

CBS-2260 20-75 psig, (138-517kPa) 1½ gpm/(5.7 lpm)

Water inlet fitting: 3/8 inch male flare.

Optimal water hardness between 125-250 TDS (6-13 grain)

Coffee Filter Size: 20" X 8" - standard FETCO # F004 18" X 7½" - optional half batch FETCO # F005 For optional brew basket B00828003

Temperature, as set by factory:

Important! Please use a water filter for all beverage equipment 200°F (93°C) inside water tank (at sea level)

Electrical: See electrical configuration on chart page 3. All brewers use terminal block electrical connection

Brew Volume: First Batch 3 gal. (12 lit.) Second Batch 1 ½ gal (6 lit.) Batch 3 is OFF and is configurable by user

Total Brew Cycle: Factory setting-

First batch-large: 3 gal. (12 lit.) 7½ minutes comprising 6 min. brew time & 1.5 min. drip delay. Bypass factory set at 20% Second batch- half: 11/2gal. (6 lit.) 61/2 minutes comprising 5 min. brew time & 1.5 min. drip delay. Bypass set at 10% Third batch- not set by factory and is configurable by user

Individual menu brew-process parameters are user controllable for:

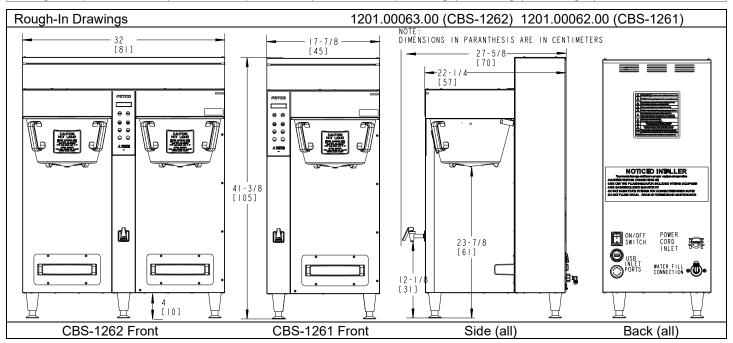

Basic user controls for brew volume, brew time, units of measure, recipe name, activating third batch

Advanced user controls for pulse count, prewet percent and prewet delay, drip delay, programmable energy saving

Brew Capacity CBS-1261 5-8 brews per hour

Output is controlled by heater power and water temperature (approximate) CBS-1262 5-20 brews per hour

Screens shown are for twin brewer. Single brewer will not have menu A4-A6.

There are seven menu groups-A-G. See the following pages for the batch parameter definitions and all settings for the brewer

TO ENTER PROGRAMMING

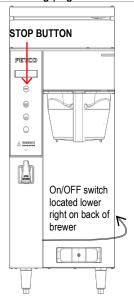

- 1-Turn brewer "OFF" from power switch
- 2-Turn power switch to "ON"
- ...Screen will initialize and then display digital process notifications
- 3-After Initialization-Red "STOP" Lamp turns on 4-Quickly press "STOP" button.

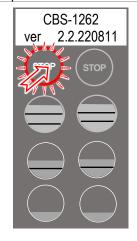

When brewer is In PROGRAMMING MODE -the screen will display:

IBATCH PRGI (or B-H)

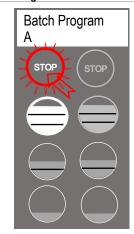

-Illuminated LED indicates active keypad positions

See the following pages for batch parameter definitions and all settings for the brewer

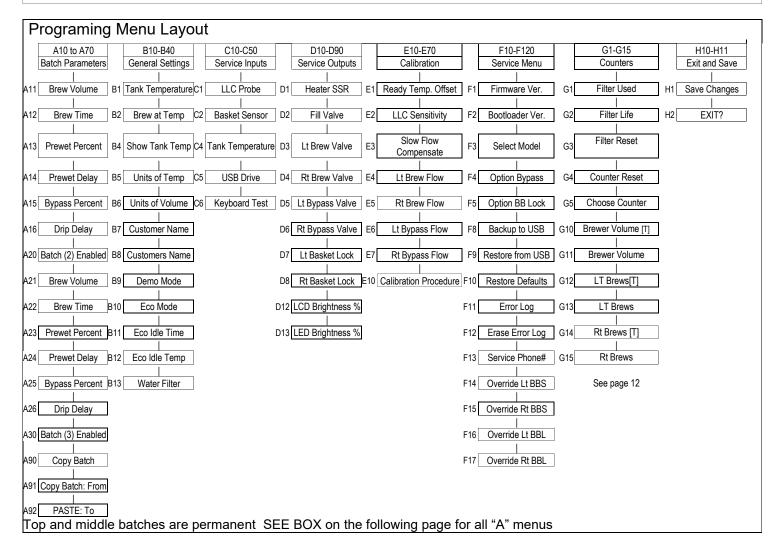

Turn power OFF Turn power ON Wait for red LED And quickly press STOP button on front touch pane

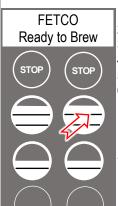

First screen will display for PROGRAMMING-A Scroll through main menu topics by pressing "STOP" button.

Note: Only the left side buttons of a two sided brewer are used for programming

Starting The Brew

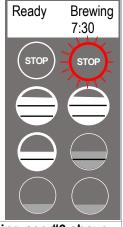

- 1. Turn the power switch "ON". (Twin Shown)
- 2. Prepare a brew basket with the correct size filter and correct amount of coffee.
- 3. Slide the brew basket completely into the rails.
- 4. Place a clean, empty, and preheated dispenser under the brew basket.
- 5. Select a batch & hold the corresponding BREW button in for 1 second to start
- STOP button will illuminate.
 - -Countdown time will display,
 - -Selected BREW button will flash to indicate brew is in progress.
 - -All other BREW buttons for that brew head will extinguish.
- 7. When the brew cycle is finished,

STOP button will extinguish and the BREW button will continue to flash for the amount of time programmed into the DRIP DELAY setting.

This indicates that coffee may still be dripping from the brew basket For safety- do not remove brew basket until drip-out is complete.

Twin Brewer ready to brew. Example shown: Pressing top right brew position

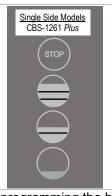

Brewing-see #6 above

RECIPE Location map

Viewing and changing settings for the brew recipes is from the "A" screens with the controls in PROGRAMMING.

The uppermost button positions are permanent and will not display programming step A 0. The table above shows in position A20 that a button position can be made active or inactive. Position A1 does not display this step

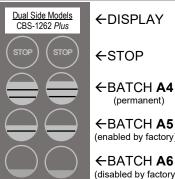

←DISPLAY→

STOP→ ←BATCH A1→

(permanent) ←BATCH A2→ (enabled by factory)

←BATCH A3→ (disabled by factory)

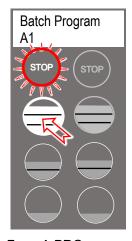

←BATCH A5 (enabled by factory)

←BATCH A6 (disabled by factory)

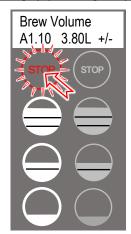

The "A" menu is the most accessed menu. It is for programming the batch volumes, brewing parameters, enabling or disabling brew buttons. The "A" menu moves through the six positions(CBS-1262-) or three positions(CBS-1261+) by entering the menu and pressing the left stop button. (only the left side is active for programming the CBS-1262+)

The A menus [A1-3 or A1-6] correspond to batch buttons [3 or 6] on the touch panel

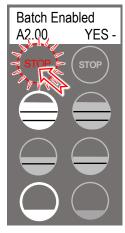

Access the A menus to PROGRAM & make changes to individual menu recipes. Menu settings can be copied Menu positions A1 and A4 [top position] are permanent. Menus A2, A3, A5, A6 can be removed by operator if desired

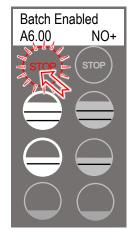

From A PRG screen Press button 1 to go into to the A menu access screens. Continue pressing button #1 to enter programming for A1

From A11 screen Press STOP to scroll to A20. (A1&A4 are permanent)

From A20 screen Press STOP to scroll through the remaining (3 or 6) "A" menus. Make any changes as required

From A60 screen Scroll out to remaining A10-to A70 programming keys. See SAVE & **EXIT** in previous table

For single and twin Position of batch buttons for CBS-1252+

The CBS-1251+ single position brewer has one row of buttons

E10	Calibration Procedure	Start NO+	Press middle button to activate procedure		Follow directions om next page

NOTE

Check for these causes for the difference in the programmed value to the brewed value. These must be corrected first.

- -CSD spray head is not in place. This will always result in an increased flow volume
- -Flow related error codes 100, 101 see page 11. Reduced water flow can cause reduced brew volume.
- -Clogged or fouled inlet valve or improperly installed inlet valve. See page 16.
- -Bypass turned on and flow is off or incorrect. Bypass flow is calculated into total flow and cause short potting if faulty
- -Verify that the controls that the brew time is correct, and the display is operating as the control may be turning off.
- -Lime scale. This can cause erratic and sometimes random under or over brew volumes. Brew valve can drip, be stuck open or closed, or fail due to lime scale accumulation. Always correct lime scale faults before changing flow rate.

Changing the flow rate corrects the brew volume if it is different from the programmed value.

Flow rate can be calculated manually or by the FLOW RATE Calibration procedure (E10) on the next page. The flow rate calibration procedure is an internal program to test for and enter corrections for flow rate inconsistencies. In the procedure: the equipment will dispense for 60 seconds. The flow dispensed is carefully measured and entered into the program. The software automatically corrects the flow rate based on the difference of the actual results to the stored values.

The procedure requires a calibrated 1½ gallon/6liter container. The flow must be very accurately measured. It will be easiest to manage the readings if the brewer volume units are placed into ounces or liters for units of measure. [Go to PROGRAM B6]. Units of measure in gallons require a calculation in fractional units of measure - which can be difficult.

TESTING SHOULD BE MADE WITH AN EMPTY BREW BASKET. NO FILTER PAPER. NO COFFEE OR TEA.

Use this formula to manually compensate for minor discrepancies in actual volume versus programmed volume. See "PROGRAM" <u>E4</u> to <u>E7</u> For valve settings and calibration. Factory set brew valve flow rates are in liter/min Default Brew Valve Flow Rate—CBS-1260 Brewers Current setting is the flow from E4,E5, E6, E7 CBS-1260 See table above for factory set default flow rates Ounces/minute Range Left Brew Valve FR 134 114 to 157 Oz ACTUAL VOLUME X CURRENT Right Brew Valve FR 134 114 to 157 Oz NEW = SETTING SETTING Left Bypass Valve FR 118 99 to 137 Oz PROGRAMMED VOLUME Right Bypass Valve FR 99 to 137 Oz 118 Set FR lower to increase volume; set higher to decrease volume. Use this formula to determine the correct setting

EXAMPLE: A three gallon brew was under by one quart (2.75 gallon) Using the formula above and the default flow rate for the brew valve (134) the new flow rate is 122.8 (rounded to 129). Enter, save and test brew to verify the new volume 3.00 **X** 134 = **129**

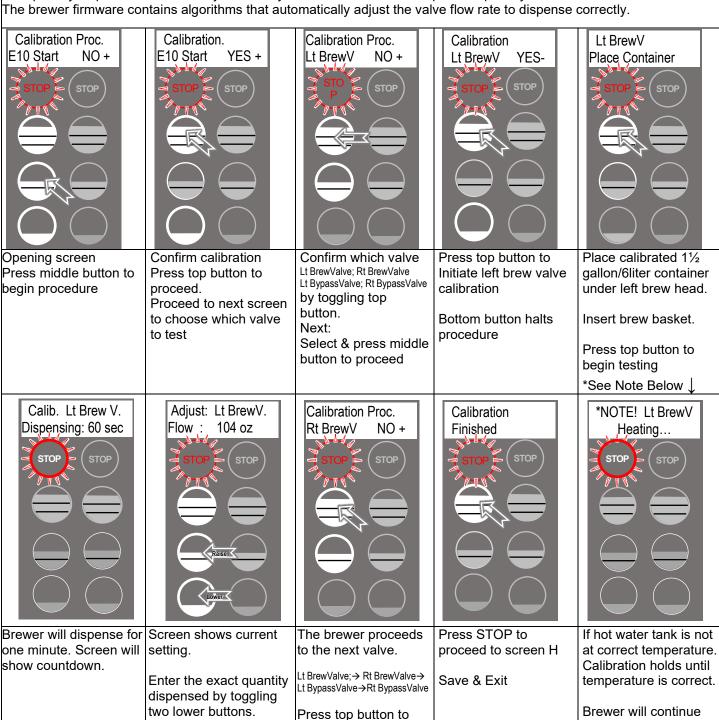

E10 Calibration Procedure - Automatic

Flow rate calibration is required when the volume dispensed differs significantly and consistently from the brewer setting. This procedure automatically dispenses the selected valve brewer for 60 seconds.

Testing should be made with an empty brew basket. No filter paper. No coffee or tea

This procedure tests the brew valve and bypass valves (right side or left side).

The quantity dispensed must be very accurately measured. Next: the dispensed quantity is entered into the brewer.

complete.

The brewer will save changes only from the "H" menu. <u>DO NOT</u> reboot brewer or toggle ON/OFF-exit as below.

TO EXIT PROGRAMMING & HOW TO SAVE CONTROL SETTING CHANGES

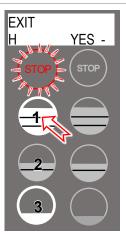

HOW TO SAVE CHANGES AND EXIT-The brewer is in PROGRAMMING mode.

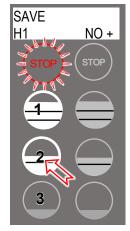

From any screen-Press STOP button until the EXIT ("H") screen appears

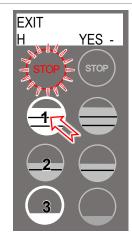

From the "H" screen Press button 2 to toggle to the EXIT-YES screen

From EXIT screen Press button 1 to toggle to the SAVE screen

From SAVE screen Press button 2, to toggle to the SAVE-YES screen

To SAVE and EXIT Press button 1 to SAVE your changes and EXIT

NOTE: User Settings will be erased and overwritten to factory default settings by the following five programming changes

- 1) When setting or changing units of display for the tank temperature (F Fahrenheit or C Celsius). (SETTING B4)
- 2) When setting or changing units of display for the volume (L liters, G gallons).
- 3) When setting brewer model →The software sets equipment to brewer defaults
- 4) When loading from USB (Reprograms settings)
- 5) When restoring defaults (Reloads to defaults)

(SETTING B5)

(SETTING F3)

(SETTING F9)

(SETTING E10)

Operator Training

Review the operating procedures with whoever will be using the brewer.

Pay particular attention to the following areas:

- 1. Always pre-heat the dispensers before the first use of each day by filling them halfway with hot water and letting them stand for at least 5 minutes.
- 2. Do not remove the brew basket from a coffee brewer until it has stopped dripping.
- 3. Make sure the dispenser is empty before brewing into it.
- 4. Show how to attach covers, close, and or secure the dispensers for transporting.
- 5. Show the location and operation of the water shut off valve as well as the circuit breaker for the brewer.
- 6. Steam from the tank will form condensation in the vent tubes. This condensation will drip into and then out of the brew baskets. Up to 1/4 cup/118cc discharging overnight is possible. Place an appropriate container under each brew basket when not in use.
- 7. We recommend leaving the power to the brewer on overnight. The water tank is well insulated and very little electricity is used to keep the tank hot. Leaving the brewer in the "ON" position will also avoid delays at the beginning of shifts for the brewer to reach operating temperature.

Cleaning & Maintenance

After Each Brew:

- 1. Dispose of grounds and rinse brew basket.
- Never strike a brew basket or hit it against a hard surface.
 This will damage the brew cone, and may damage the brew basket support rails
- 3. Rinse dispensers before reuse.

Every Day:

- 1. Wash brew basket with hot sudsy water.
- 2. Pull CSD from the spray head, it is magnetically attached. Use gloves or a heavy towel. > Wash off any film and reattach. Use vinegar if limescale filming is present.
- 3. Clean dispensers with hot suds water and a brush, rinse and air dry.
- 4. Use only a soft cloth and hot suds on the outside to avoid scratches. Never use abrasives that will scratch surface.

Weekly

- 1. Use a commercial coffee dispenser cleaner such as URNEX™, TABZ™, DIP-IT™ or Squeak 'n Clean™.
- 2. Carefully Follow the instructions supplied with the cleaning product
- 3. Never use spray cleaners, solvent, solvent based cleaner or petroleum based polish anywhere on dispensers

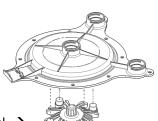

Warning

- 1. Turn off power before any cleaning procedure, including wiping the exterior for appearance reasons.
- 2. Dry the exterior, especially the face panel, before turning on power.
- 3. Do not apply any type of spray cleaner on the face panel of this equipment.
- 4. Never use solvent or solvent-based cleaner or petroleum based polish anywhere on this equipment.
- 5. Dry the face of the touch pad before turning on power
- 6. Do not electrically energize this equipment or attempt operation without all covers in place and all screws fastened.
- 7. Unplug machine before disassembly or servicing.

Safety Notes

- 1. Professional installation is required. This appliance is manufactured only for commercial use
- 2. Operational requirements and maintenance for commercial cooking appliances differ from household appliances.
- 3. Operators must be trained for this equipment and must understand the use, maintenance and hazards.
- 4. Access to the service area is restricted to persons having safety/hygiene knowledge and practical experience of the coffee brewer. This appliance must be installed in locations where it can be overseen by adult trained personnel.
- 5. Do not attempt to move hot beverage equipment once it is filled. Drain equipment before moving.
- 6. FETCO commercial coffee brewers prepare large amounts of coffee or tea in a single batch using very hot water
- 7. Commercial coffee brewers provide very hot water from the spray head, brew basket and faucet when it is pulled.
- 8. Coffee brewers may continue to dispense very hot water from the mechanically operated faucet after the electronic touchpad is completely disabled by turning off the power switch on the lower back of the unit or unplugging the unit.
- 9. For safety, the brewer control locks the brew basket for 6.0 minutes after starting the brew.
- 10. Never attempt to defeat the factory set (default) time that the brew basket is locked for safety from start of brew.

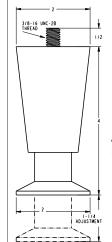

Keep these instructions for training and future reference.

Brewer Setup

1) Attach legs

NOTE-Assemble legs immediately after unpacking the brewer and before connecting it to utilities

NOTE-Legs are located in brew basket

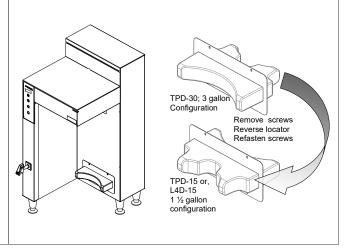

4" legs -

Part number 1073.00007.00 3 required for CBS-1262 4 required for CBS-1261

Always attach legs before installing. Legs are sent from factory inside brew basket.

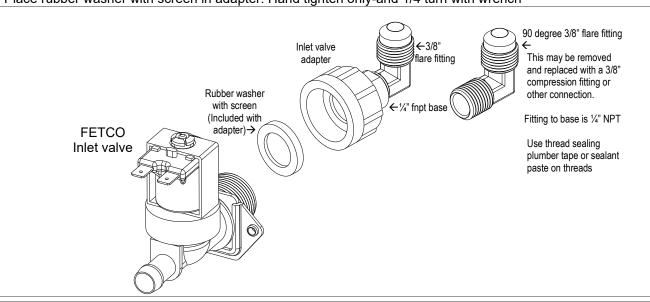

2) Verify dispenser locator

Reversible dispenser locator is user configurable From TPD-30 (3 gal) To L4D-15 or TPD-15 (1½ gal)

3) Attach water inlet adapter

Place rubber washer with screen in adapter. Hand tighten only-and 1/4 turn with wrench

Install the adapter on inlet valve first before attaching water line. Adapter is shipped in the brew basket The valve threads are 3/4" BSP MALE THREAD and are not 3/4 garden hose fittings.

Use of any other connector to valve will damage the valve

DO NOT use USA dishwasher water adapter or USA washing machine adapter for this connection.

The threads on these USA adapters are unusable for the valve

TO PREVENT DAMAGE AND INSURE PROPER EQUIPMENT OPERATION

The inlet valve thread is 3/4 INCH BSP (British Standard Pipe).

This valve is not a standard USA washing machine or dishwasher thread (3/4" GHT)

- -Use only the plumbing adaptor kit included with this equipment. Use the gasket included in adaptor kit
- -Plumber's tape is not recommended for the adapter to valve connection
- -Hand tighten adapter on valve with gasket, then very lightly wrench 1/4 turn to set

-DO NOT SUBSTITUTE FITTINGS FOR CONNECTING TO WATER SUPPLY

Damage to inlet valve from improper installation will void the warranty

NOTE: DO NOT PLUMB TANK DRAIN. DRAIN IS FOR SERVICE AND MAINTENANCE.

(For Qualified Service Technicians Only)

General:

- 1. If not installed correctly by qualified personnel, the brewer will not operate properly, and damage may result.
- 2. Utilize only qualified beverage equipment service technicians for service and installation.
- 3. Always have an empty dispenser under spray head of all coffee brewing equipment-including when at idle
- 4. Damages resulting from improper installation are not covered by the warranty and will void the warranty.
- 5. Attach the legs to the brewer before attaching the power and water lines. See Page 15 Below are the key points to consider before installation:

Electrical:

- 1. All CBS Series brewers require an electrical ground wire. Installation without grounding is dangerous.
- 2. Note Equipotentiality Terminal, if present, (To identify the terminals which, when connected together, bring the various parts of equipment or of a system to the same potential, not necessarily being the earth (ground) potential, e.g. for local bonding.)
- 3. Verify voltages, polarity, circuits, and circuit breaker access before attaching equipment.
- 4. Brewers in this series wire differently in regard to a neutral wire. Review the wire diagrams.
- 5. The electrical diagram is located in the User's Guide and online at www.fetco.com.
- 6. Make sure of the tight grounding of the equipment and use the external ground bolt.
- 7. The installation must comply with applicable federal, state, and local codes having jurisdiction at your location. Check with your local inspectors to determine what codes will apply.

→ See wiring diagrams on pages 28-35 for connections

Plumbina:

- 1. North America: All installations must comply with applicable federal, state, or local plumbing codes.
- 2. All Others: The water and waste piping and connections shall comply with the International Plumbing Code, International Code Council (ICC), or to the Uniform Plumbing Code (IAPMO).
- Install a backflow prevention device. Most municipalities require a recognized backflow preventer Usable on all hot beverage and cold beverage equipment is a WATTS® SD-2 or SD-3.
 - WATTS spring loaded double check valve models are accepted by most zoning authorities.
 - →The check valve should be as close to the water supply inlet of the beverage equipment as possible
- 4. All beverage equipment must use a water filter. A finishing carbon filter is preferred
- Install the filter unit after a water shutoff valve and in a position to facilitate filter replacement.
- 6. The water line and newly installed filter cartridge must be flushed thoroughly prior to connecting it to the brewer to prevent debris from contaminating the machine
- 7. Verify that the water line will provide a flow rate of at least 1½ gpm/(5.7lpm) per minute and the water pressure is between 20-75 psig (138-517kPa) before making any connections
- 8. Only use the supplied factory fitting to attach water supply line to brewer (shipped in brew basket) See page 15
- 9. The suppled fitting is a 3/8" flare/compression fitting for 1/4" supply line. Other adaptors may be substituted.
- 10. Hand tighten the factory fitting when connecting the stub on the brewer. This will reduce stress on the internal connections and reduce the possibility of leaks developing after the install has been completed

Tank Drain

The water tank must be drained before maintenance procedures, and when the unit is to be relocated or shipped. Drain is for service use only and must not be permanently connected. NOTE: Never plumb a water line to the drain.

- 1. Disconnect power and water to unit. DANGER: Ensure that all utility connections to the brewer are broken.
- 2. Move the unit near a sink or obtain a container large enough to hold four gallons of water.
- →Note: The CBS-1251 hot water tank when full holds 6.5 gallons; the CBS-1252 11.1 gallons.
- 3. Remove the front panel and tank cover and allow the tank to cool to a safe temperature
- 4. The tank drain line and clamp are located inside-under the hot water tank. Pinch the drain line clamp to close
- 5. Locate the fill valve against the back wall, using pliers, loosen the hose clamp and move it back over the tube.
- →Note Do not loosen the hose clamp to the bottom of the hot water tank
- 6. Crimp the tube an inch or two away from the drain plug to prevent water from flowing and pull it off the valve.
- 7. Pull the tube end out of the brewer and position over sink or bucket.
- 8. Release the crimped tube and hose clamp and allow the water to flow into the sink or container.
- 9. Reverse steps 4-8 when service is complete. Ensure pinch clamp is open and hose clamps are in place.

Brewer	Hot Water Tank Capacity	OPEN Leave open for use	
CBS-1261 Single	8.6 gal 33 liter	'	
CBS-1262 Twin	15.9 gal 60 liter	PINCH SHUT To drain tank & service brewer	AI!

Installation safety and hygiene directions-For International and CE equipment

- 1. Access to the service area is restricted to persons having safety/hygiene knowledge and practical experience of the coffee brewer. This appliance must be installed in locations where it can be overseen by trained personnel.
- 2. For proper operation, this appliance must be installed indoors where the temperature is between 10°C/50°F to 35°C/95°F. Drain and remove all liquid from equipment and lines if exposed to freezing temperatures.
- 3. All commercial cooking equipment, including this unit, is not intended for use by children or persons with reduced physical, sensory, or mental capabilities. Ensure proper supervision of children and keep them away from the unit.
- 4. Children should be supervised to ensure that they do not play around hot beverage equipment.
- 5. This unit must be installed and serviced by qualified personnel only.
- 6. Installation must conform to all local electrical and plumbing codes. Installation by unqualified personnel will void the unit warranty and may lead to electric shock or burn, as well as damage to unit and/or its surroundings.
- 7. If the power cord requires repair or replacement-it must be performed by the manufacturer or authorized service personnel with the specified cord only from the manufacturer in order to avoid a hazard.
- 8. Review the dimensions for the unit and verify that it will fit properly in the space intended for it. Verify that the counter or table will support the total weight of the brewer and dispensers when filled (See: Technical Data).
- 9. Place the brewer on the counter or stand. When the brewer is in position, level it front to back as well as side-toside by adjusting the legs.
- 10. Brewers will need a sturdy supported surface for operation. Do not move brewers when filled.
- 11. Do not tilt appliance more than 10° to insure safe operation.
- 12. Unit is for protected indoor use only. Do not steam clean or use excessive water on unit.
- 13. This unit is not "jet-proof" construction. Do not pressure wash or use jet spray to clean this unit.
- 14. The unit is not waterproof-do not submerge or saturate with water.

Equipment exposed to flood and contaminated must not be used due to electrical and food safety. Do not operate if unit has been submerged or saturated with water.

All electrical connections must be in accordance with local electrical codes and any other applicable codes. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent, or similarly qualified persons in order to avoid a hazard.

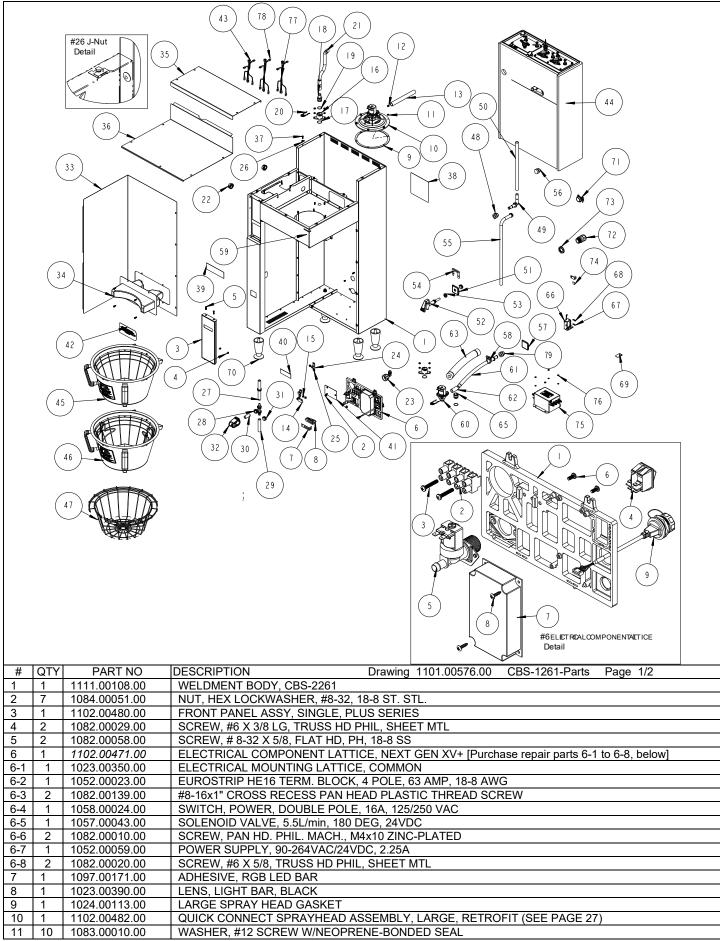

To prevent an electric shock hazard this device must be bonded to equipment in close proximity with an equipotential bonding conductor. This device is equipped with a bonding lug for this purpose and is marked with the following symbol

\triangle	WARNING To reduce risk of electric shock or fire.
\triangle	FETCO® Hot Beverage Equipment is for commercial use only.
A	Do not remove or open cover. No user serviceable parts inside. Refer installation and service to qualified personnel.
\triangle	Caution, disconnect from power supply before servicing.
\triangle	GROUND: National Electrical Code requires separate grounding wire.
Â	Use dedicated circuit with capacity rated by local code or National Electrical Code for the current draw of this equipment. Check serial number plate on right side for power requirements.
A	Locate unit away from source of heat. Do not install or use near combustibles.
\triangle	THIS APPLIANCE IS ENERGIZED WHENEVER IT IS CONNECTED TO A POWER SOURCE
<u> </u>	FAILURE TO COMPLY RISKS EQUIPMENT DAMAGE, PROPERTY DAMAGE, FIRE, OR SHOCK HAZARD
Notice	This equipment must be installed with a backflow protection device to comply with federal, state or local municipality codes.
Notice	Read the user guide before installing and operating this unit.

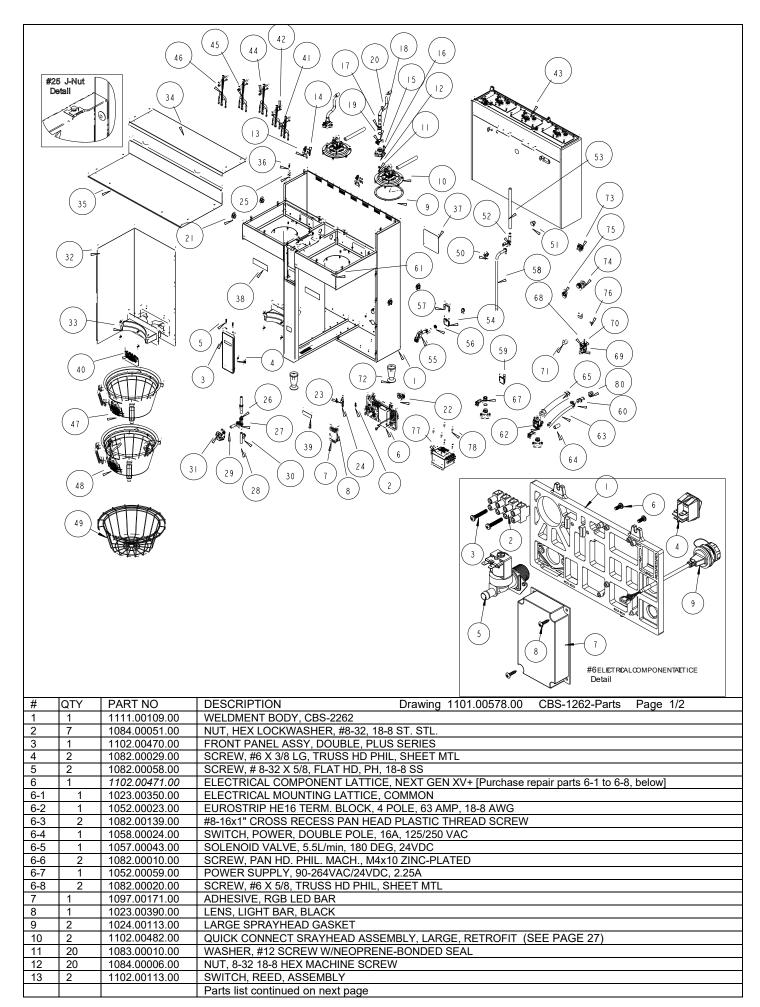

Labels and warnings for hot beverage equipment
